First step: a sample of each report, with invented data

To measure dropout we will need the reports listed in the **data request**. For this first step **we do not want real data**: the **structure** of each report as your system produces it —field names, columns, the codes it uses— plus **five invented test rows** per report is enough.

With that we tune the application to your system and validate the formats. Then we give you access to the app: you load the real reports on a clinic computer and they go in without surprises.

This step involves no patient data at all, so email is fine. Please do not send anything real: no medical record number, no date belonging to an actual patient.

The whole process

1 A sample of each report
Your system's headers and five invented rows per report.
THIS DOCUMENT

2 LUUMA tunes the reading
We adapt the app to your system and tell you if anything is unclear.

3 Access to the app
We send you the link: it opens in the browser, nothing to install.

4 You load the real reports
On a clinic computer, as the system exports them. The app discards personal data as it reads and uploads nothing.

5 You review its questions
What the app cannot decide on its own. The first time, on a call with LUUMA if you like.

6 Report and counts Excel
You keep your dropout report (HTML and PDF) and send us the counts Excel.

What to send for each report

1. The **exact column headers** your system produces: in your language, with its abbreviations and in the same order. If the report has columns we did not ask for, leave them in: seeing the whole report helps too.
2. **Five rows of invented data.** They do not need to be many or tell a complete story.
3. Invented values that **look like real ones**: the same date format, the same codes and abbreviations (how the system writes a cancelled retrieval, a negative test or a discarded embryo) and **empty cells where the system leaves them empty**, not 0.
4. The **same invented patient numbers across all reports** (for example 000123), so we can check that the reports link up.
5. **One file per report, as the system exports it** (Excel or CSV), without reformatting it or renaming columns.

The reports

The same ones as in the data request, at the same level. Send a sample of the ones you have.

Report	Level	What we use it for
Retrievals	Required	Each own-egg retrieval opens a cycle: it is the basis of the whole measurement. Age drives the report by age.
Transfers	Required	The outcome of each transfer tells us which cycle ended in a baby, which continues and which was lost.
Cutoff date	Required	It tells us which cycles have had 12 months of follow-up; when each site's records start tells us whether a retrieval is the first.
Donor-egg cycles	Required if there is a donor-egg program	Moving to donor eggs means staying in treatment: without this report, that patient shows up as dropout.
Embryology by retrieval	Strongly recommended	It separates dropouts with no viable embryos from those who had embryos and did not transfer.
Cryopreservation	Recommended	It tells us how many stored embryos each patient has left after her last procedure.
Pregnancy outcomes	Only if needed	Only if the outcome is not in Transfers: it is linked to each transfer.
Price of one retrieval and one transfer	Optional	It fills in the report's revenue-at-risk calculator. If you do not send it, the calculator comes out blank for you to fill in.

How to send it

- **Reply to the email with the files attached**, one per report, plus the cutoff date and the prices in the body of the email.
- Since the data are invented, regular email is fine. The real reports are never sent: they are loaded into the app on a clinic computer (step 4).
- If a real data point slips in by mistake, tell us: we delete it without processing it and ask you for the file again.

One sheet per report

Each sheet says what we use the report for, which fields we expect, and shows a sample with invented data. All the samples tell the same fictional story: four patients (000123, 000457, 000981 and 001204) at two sites, Main and North. **Your system's column names and codes will be different: that is exactly what we want to see.**

empty cell: left empty by the system; please do not fill it with 0

Retrievals Required

What we use it for: Each own-egg retrieval opens a cycle: it is the basis of the whole measurement. Age drives the report by age.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Patient number	The same in every report (MRN or other)	Text or number; with leading zeros if it has them	**Required**
Retrieval date	The day of the procedure, not the day it was entered	Your system's (MM/DD/YYYY, YYYY-MM-DD…)	**Required**
Retrieval type	Own eggs, donor, egg freezing or cancelled	System code or text	**Required**
Age at retrieval	Age in years that day (or the date of birth)	Whole number	**Required**
Site	Where it was done	Code or name	If more than one site
Status	If the system keeps done / cancelled apart from the type	Text or code	If available
Oocytes	Oocytes retrieved	Number; empty if cancelled	If available
Physician, payer, prior cycles	Whatever the report already has	Text or code	If available

ILLUSTRATIVE SAMPLE (INVENTED DATA)

MRN	Retrieval Date	Site	Cycle Type	Age	Physician	Oocytes	Status
000123	02/03/2025	Main	IVF own eggs	34	Dr A	12	Done
000457	03/11/2025	North	IVF own eggs	38	Dr B	9	Done
000981	04/02/2025	Main	IVF own eggs	41	Dr A		Cancelled
001204	05/27/2025	North	IVF own eggs	36	Dr B	15	Done
000981	06/18/2025	Main	IVF own eggs	41	Dr A	2	Done

A cancelled retrieval (000981, 04/02) and the same patient retrieving again in June. Donor retrievals and egg-freezing retrievals go in this same report, with their type.

Transfers Required

What we use it for: The outcome of each transfer tells us which cycle ended in a baby, which continues and which was lost.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Patient number	The same as in Retrievals	Text or number	**Required**
Transfer date	The day of the procedure	Your system's	**Required**
Outcome	Negative, loss, live birth, ongoing; not just the β-hCG (here or in Pregnancy outcomes)	Code or text; empty if not known yet	**Required**
Site	Where it was done	Code or name	If more than one site
β-hCG	The pregnancy test	Positive / negative or the value	If available
Date of loss	If the pregnancy was lost	Date	If available
Fresh or frozen; embryo source	Own or donated	Code or text	If available
Source retrieval; transfer number	Which retrieval the embryos came from (date or number)	Date or number	If available

ILLUSTRATIVE SAMPLE (INVENTED DATA)

MRN	Transfer Date	Site	Type	Embryo Source	Retrieval Date	Transfer #	β-hCG	Outcome	Loss Date
000123	04/15/2025	Main	FET	Autologous	02/03/2025	1	Pos	Live birth	
001204	06/01/2025	North	Fresh	Autologous	05/27/2025	1	Pos	SAB	07/18/2025
001204	09/20/2025	North	FET	Autologous	05/27/2025	2			
000981	11/12/2025	Main	Fresh	Donor egg		1	Pos	Ongoing pregnancy	

A live birth, a loss with its date, a transfer with no result yet (empty cells, not 0) and one with donor eggs. 000457 has no transfers.

Cutoff date Required

What we use it for: It tells us which cycles have had 12 months of follow-up; when each site's records start tells us whether a retrieval is the first.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Cutoff date	The last day up to which records are complete; it can be the export date	A date	**Required**
Start of records by site	From which date each site has complete records	One date per site	**Required**

One line in the body of the email is enough: "Cutoff date: 01/31/2026. Complete records: Main since 03/01/2019; North since 08/15/2022." Or a small table like this one:

Site	Complete records since
Main	03/01/2019
North	08/15/2022

Donor-egg cycles

Required if there is a donor-egg program

What we use it for: Moving to donor eggs means staying in treatment: without this report, that patient shows up as dropout.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Patient number	The recipient, with the same number as in Retrievals	Text or number	**Required**
Cycle date	Cycle start or transfer date	Date	**Required**
Site	Where it was done	Code or name	If more than one site
Type	Donated eggs or embryos	Code or text	If available
Donor code, status	No donor names	Code or text	If available

ILLUSTRATIVE SAMPLE (INVENTED DATA)

Recipient MRN	Cycle Date	Site	Type	Donor ID	Status
000457	10/20/2025	North	Donor embryos		Prep
000981	11/07/2025	Main	Donor eggs	D-0045	Transferred

Two of the four patients move to donor eggs: that is why this sample has two rows.

Embryology by retrieval

Strongly recommended

What we use it for: It separates dropouts with no viable embryos from those who had embryos and did not transfer.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Patient number	The same as in Retrievals	Text or number	**Required**
Retrieval date or number	Which retrieval the embryo belongs to	Date or number	**Required**
Stage or day	How far it developed (blastocyst, day 5…)	Code or text	**Required**
Disposition	Transferred, vitrified, discarded	Code or text	**Required**
Biopsy	Whether it was biopsied for PGT-A	Yes / No	Strongly recommended
PGT-A result	Euploid, aneuploid, mosaic, no result	Code or text; empty if not tested	If available
Embryo	Embryo number, if one row per embryo	Number or code	If available

ILLUSTRATIVE SAMPLE (INVENTED DATA)

MRN	Retrieval Date	Embryo	Day	Grade	Biopsy	PGT-A	Disposition
000123	02/03/2025	1	D5	Blast 4AA	Y	Euploid	Vitrified
000123	02/03/2025	2	D6	Blast 3BC	Y	Aneuploid	Discarded
000457	03/11/2025	1	D5	Blast 4BB	Y		Vitrified
001204	05/27/2025	1	D5	Blast 5AA	N		Fresh ET
001204	05/27/2025	2	D5	Blast 4AB	N		Vitrified

One embryo biopsied with no result (000457), one aneuploid discarded, and embryos not biopsied. 000981's June retrieval produced no embryos: it has no rows. One row per retrieval with the counts (oocytes, MII, blastocysts, euploid…) works too.

Cryopreservation

Recommended

What we use it for: It tells us how many stored embryos each patient has left after her last procedure.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Patient number	The same as in Retrievals	Text or number	**Required**
Vitrification date	When it went into storage	Date	**Required**
Exit date and type	Thawed, discarded or shipped	Date and code; empty if still stored	If available
Embryo or count	Which embryo or how many	Number	If available
Storage location	Tank, canister…	Code	Not needed

ILLUSTRATIVE SAMPLE (INVENTED DATA)

MRN	Embryo	Freeze Date	Tank	Thaw Date	Reason
000123	1	02/08/2025	T2-C4	04/15/2025	Thawed for FET
000457	1	03/16/2025	T1-C2		
001204	2	06/01/2025	T1-C7	09/20/2025	Thawed for FET

000457 still has one stored embryo (no exit date). If you only have the current inventory, that works too.

Pregnancy outcomes

Only if needed

What we use it for: Only if the outcome is not in Transfers: it is linked to each transfer.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Patient number	The same as in Retrievals	Text or number	**Required**
Transfer date or number	Which transfer it belongs to	Date or number	**Required**
Outcome	Negative, loss, live birth, ongoing	Code or text; empty if unknown	**Required**
Outcome date	Date of the loss or the birth	Date	If available

ILLUSTRATIVE SAMPLE (INVENTED DATA)

MRN	Transfer Date	Outcome	Outcome Date
000123	04/15/2025	Live birth	01/05/2026
001204	06/01/2025	SAB	07/18/2025
001204	09/20/2025		
000981	11/12/2025	Ongoing pregnancy	

The same transfers as above, for systems that keep the outcome separately.

Price of one retrieval and one transfer Optional

What we use it for: It fills in the report's revenue-at-risk calculator. If you do not send it, the calculator comes out blank for you to fill in.

FIELDS WE EXPECT

Field	What it is	Usual format	Needed?
Price of one retrieval	The clinic's fee, excluding medication	Amount and currency	If available
Price of one transfer	The clinic's fee, excluding medication	Amount and currency	If available

One line in the email: “Retrieval: USD 12,500 · Transfer: USD 4,200 (clinic fee, excluding medication).”

If a report does not exist or the data are in another system

- Just tell us and carry on with the others. **Please do not build it by hand**: if it cannot be exported, we will work out together how to get it.
- If the data are kept in another system (for example the lab's or the embryo bank's), please send a sample from that system too, with the same invented patient numbers.
- If the lab uses a different patient number, please also send a sample of the crosswalk table that links the two.
- If one export contains several reports (for example retrievals and transfers together), send it as it is: no need to split it.

It also helps to know

- The name of the system and its vendor (and the version, if you know it).
- Whether you changed system or patient numbering, and when.
- How you report to the national registry (for example SART/CDC): by hand, or with a file the system generates.
- Who produces the reports: someone at the clinic, or whether they have to be requested from the vendor.
